

Project Title: **University of Maryland Course Experiences Fall 2024**Number of Students Invited: **18**Number of Evaluations Submitted: **12**Response Rate: **67%**

Report Comments

This report presents feedback received from students for the course **CALCULUS II** and for the Instructor **Aristomenis Papadopoulos** in that course. Course means are calculated from all responses by all students in the unit (i.e., course section/lecture) on that item and exclude N/A (not applicable) responses.

Indication is provided below for the Report Group if there is one affiliated with this course section, otherwise it is blank. The Report Group will be the lead section of a grouped course (i.e. multi-section lecture) and/or the primary of cross-listed courses. Subsections are found in the Instructor Subgroup Report.

Semester: Fall 2024**College: CMNS-College of Computer, Math & Natural Sciences****Department: CMNS-Mathematics****Course #: MATH141H****Section #: 0201****Course Title: CALCULUS II****Report Group:****Instructor: Aristomenis Papadopoulos**

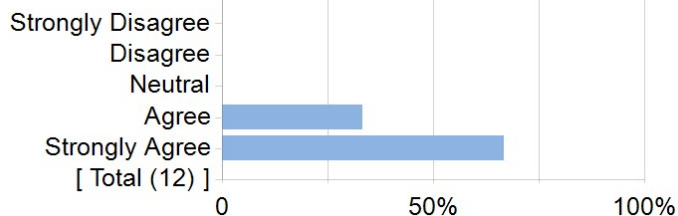

University-Wide Course Items Applied to All Section Instructors

N/A responses have been excluded from the following calculations.

Campus Wide Course Questions

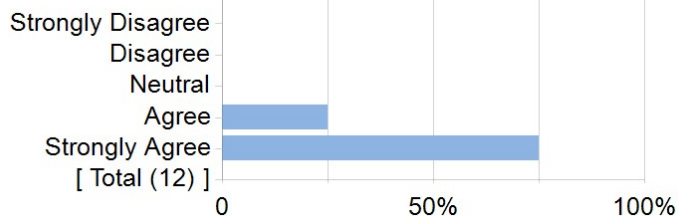

1. The content covered in the course was directly related to the course goals and objectives.	2. The assessments (e.g., tests, quizzes, papers) were directly related to what was covered/practiced in the course.

How did this course fit into your academic plan and/or educational goals?

Options	Count
Required for program/major/minor/certificate, or as a prerequisite	12
Elective for program/major/minor/certificate	0
To satisfy an undergraduate General Education requirement	1
In preparation for research, employment, or future program/degree	1
Personal interest in content	2
Other/It doesn't	0

The counts above are based on a total of **12 responses** to the survey.

Comment Items Applied to All Section Instructors

What about the course and/or instruction most enhanced your learning?

Comments
I liked that the homework wasn't easy. Yes, it was definitely challenging and needed to be divided with group-work, but it did help me comprehend and understand the content to a better degree.
The practice problems were very useful to prepare for quizzes and exams. Although I understand not posting the solutions, I feel that for those who do the problems and want to know if they are correct, that the answers should be posted late the night before a quiz/exam. So, those who did them can know any errors without being able to rewire their mind the night before a quiz.
Doing proofs and derivations in class was useful, but I feel more time should have been spent on examples on the topics.
The small classroom setting really helped me understand some of the more abstract topics.
The lectures and quiz schedule was great, I felt well prepared to every quiz and exam.
The office hours and practice/lesson examples were very helpful in learning how to apply and understand what we learn in class. Going back over confusing parts of a problem and reviewing what we learned from the past class after a weekend was also helpful.
Instructor had very good lectures and answered questions well. Reviews prepared me for the tests and the tests were related to the course material.
It is evident that Aris cares a lot about his students' success, and he was very understanding in terms of re-explaining content or answering questions.
The office hours were very helpful for the exams and quizzes!
I enjoyed the small class size and the more casual energy of the class. The office hours and in class reviews were very helpful.
I think the four homework assignments most enhanced my learning. I know a lot of people complained about them—including me at times. However, it made me actually realize that math is a really fun subject, both computationally and aesthetically. I went down a lot of rabbit holes on math stack exchange and on math youtube channels because of the assignments. Before the only things I would watch related to math were Khan Academy and Organic Chemistry Tutor videos, so this was a really interesting switch. It also made me realize that most of math from here on out is revolved around proving things and actually understanding them, which I genuinely did not know prior to the course. Overall, I think the homeworks most enhanced my learning and have motivated me to take more math classes over the next four years.
This class was very challenging, but I believe it gave me a good understanding of the material, and the nature of the assignments, especially the homeworks, I feel force us to reach a deeper level of understanding than we would just memorizing formulas and learning how to solve specific problems.
The homework, although long, was extremely helpful in mastering the topics of each unit. The practice problems before each quiz allowed me to feel confident in my knowledge and overall helped distress.

What about the course and/or instruction can be improved the next time it is offered?

Comments
For homework, I know you have the argument that math doesn't happen in a vacuum, and I agree, but it is pretty inconvenient to try and create times to meet up with your group to work on problems together.
Because of this, what would often end up happening would be that each person does a problem or two from the packet. We would isolated hard problems for ourselves on only one topic each.
What may work better is to assign one question a week (like you mentioned halfway into the semester), where everyone in the group can work on that topic, just maybe a small part of it.
As for practice problems, I would refer to what I mentioned in the previous question.
Maybe a bit more structure, less last-minute changes, but nothing massive.
The homework was like extra hard/ conceptual for like not reason sometimes, but it wasn't so bad.
My professor was good at adjusting to the class already so just continuing to pay attention to how the class is doing and adjusting the pace of the learning to the class would be good. Sometimes the proofs at the beginning of a new unit would be difficult to understand in the beginning. My professor started doing this but providing an easy example connected to the proof might be helpful.
A TA for additional aid would be incredibly helpful. The professor's office hours were crowded and often it was hard to accommodate everyone's requests within the hour.
Less proofs please!
could be better organized and homework could be more structured
Make the homework more similar to what was covered in class or provide resources on where to look for information not covered.
The pacing!!!! should!!!! be altered!!!! I don't think we needed the first two weeks of the course to have moved that slow. I think it was only the third week that we received our first quiz, and it was on a topic that's been covered in calc 1: volumes of revolution. Starting the cycle of quizzes during the second week would be much more helpful, in my opinion. It would also make the last third of the content far less rushed. Sequences and series were the topics that were the least related to anything that we had learned before. Spending more time on that and the following topics would be much better.
n/a
Having a more concrete plan as to what is due and when. I understand this is the first time he has taught the class, so we were like guinea pigs, but I feel like students would benefit more from knowing when quizzes will be and what will be dropped at the end of the semester.
